Australia's regional competitiveness index

FOLLOW US

FACT SHEET

[In]Sight

Can Australia maintain its high living standards and build new sources of prosperity after the resources boom? Do we really have the workforce, technology, infrastructure and institutions to be part of the rise of Asia?

These questions and others like them are at the heart of Australia's future competitiveness challenge.

To meet this challenge, Australia needs to ensure that all regions – no matter where they are located – are able to make the most of their advantages.

[In]Sight: Australia's regional competitiveness index provides a lens on where we are now and what advantages Australia can build on to shape a prosperous future.

Using internationally proven frameworks, *[In]Sight* provides 624 competitiveness profiles at the Local Government Area (LGA) and regional level. Data and rankings for ten themes and 68 indicators capture the competitive position of each part of our nation.

Regional decision-making should no longer be based on national and state averages. With *[In]Sight* Australia can respond to the unique needs of different places and realise its competitive opportunities.
